20 Pallet Types

Pallets are made from 4 basic materials such as wood, plastic, metal, and corrugate or cardboard. We have created the top 20 type of pallets you will need to think about for your companies shipping and logistic needs.

New Wood 48x40
Standard GMA Pallet

Recycled Wood 48x40 Grade
A Standard GMA Pallet

New Wood 48x40 Block
Pallet

New Wood 48x40 Pallet

Pressed Wood 48x40
Pallet

New Wood 36x36 Pallet

Export Pallet

Businesses that ship internationally or across borders need to use export pallets. The easiest to indentify export pallet is the plastic pallet.

Nestable Plastic Pallets

Nestable plastic pallets stack or sit on top of each other and take up less space. These pallets have four way (4 way) forklift access because they have 9 legs for support.

Industrial Strength Plastic Pallets

Industrial plastic pallets are good for exactly what they sound like they would be good for ...heavy duty jobs.

Heavy Duty Pallets

Heavy Duty Pallets are actually also nestable but they are made of structural foam. The pallet structure is made so that any liquids or waters will drain right through the pallet to keep the unit load dry.

Solid Top Rackable Pallets

These look just like they sound. They have a solid plastic top and are the standard 48x40 size to fit in standard pallet racks in most warehouses.

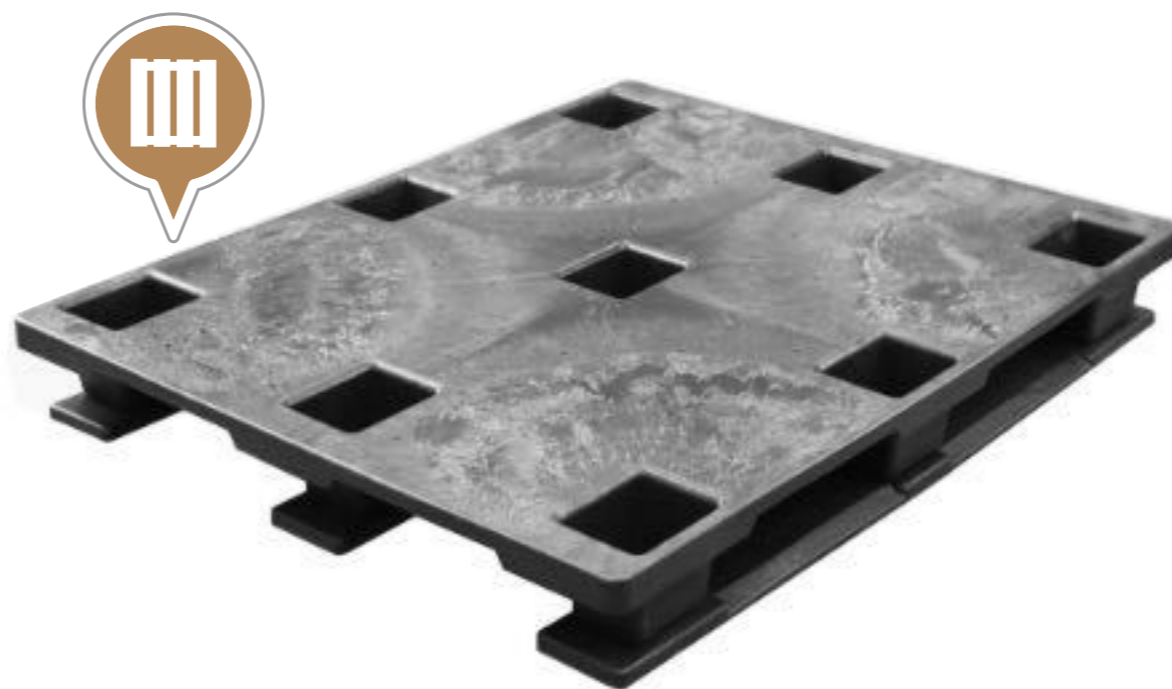

Rackable Pallets

Rackable pallets are the standard sized 48x40 GMA pallet and sized to fit in standard pallet racks in most warehouses. Companies that are compliant to USDA and FDA regulations use these pallets.

Stackable Pallets

Stackable pallets are great for double stacking pallets in a truck for shipping. These pallets are exempt from ISPM 15 (exporting regulations) because they are not wood.

Plastic Drum Pallets

Plastic drum pallets are designed to store 55 gallon plastic drums. Four 55 gallon drums can sit on these pallets perfectly. The size is 48x48 and they can hold a capacity of up to 30,000 pounds.

Recycled Wood Pallets

The recycled wood pallet is the most common pallet in the industry. More than 2 billion of these pallets are estimated to be moving around in the economy daily.

New wood pallets can come in many sizes and shapes and can be custom made. New wood pallets are exactly what they sound like; they are made from new lumber.

Pressed Wood Pallets

Pressed wood pallets are preferred in some industries that need a lightweight pallets. Pressed wood pallets are nestable and can be exported because they are ISPM exempt.

Wood Drum Pallets

Wood drum pallets are very sturdy and are designed to hold 455 gallon drums. What makes these pallets unique is they have 4 stingers that give added strength.

Block Pallet

A wood block pallet is a discussion all by itself but we will try to discuss the benefits here to give you a good idea if this pallet will work for your business. Most wholesale clubs require a block pallet.

Metal Pallets

Metal pallets are great for warehouse storage over long periods of time. The most common metal pallets are aluminum pallets and metal pallets.

Spill Containment Pallets

Spill containment pallets have catch tray underneath. this pallet traps leaks to prevent spills.

Cardboard Pallets

There are many ways to make a corrugated pallet. Basically a corrugated pallet is a pallet made of cardboard.

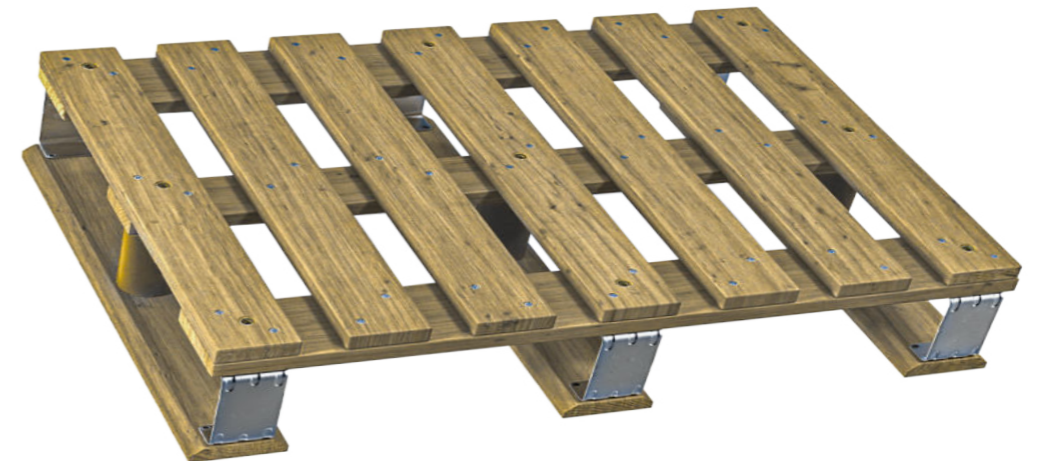

European Pallet

The most widely used commodity in the global shipping industry is the pallet. In Europe, they have a standard pallet size like the US standard GMA 48x40 pallet.

Half Pallet

Half pallets are relatively new compared to the standard sized pallet. Businesses have become more efficient in shipping and determined that using a half pallet can save them money.

Display Pallets

Display pallet are used as a creative way to showcase goods in store. The merchandise is located on the pallet and is placed at a storefront.
